

# IQ Glass®

## Heated glass in your garden; *warm and cosy.*

IQ Glass® turns your veranda that is hardly used in winter months, into real 'living verandas' where life is comfortable.

From now on, enjoy your snowy garden while having breakfast. With IQ Glass® you live closer to nature, but what is more important, you create more living space.

## IQ Glass® as a heating source.

In the beginning there was wood fire, in the Middle Age we had the fire place, in the 19 th century the stove, then in the 20 ieth century we got the radiator, and now, on the break of the 21 st century, we use glass as a heating source, an ingenious system of radiant heat .

By stearing an invisible metal layer on the inside of the double glazing an agreeable radiant heat is flowing in. Perfect isolation and agreeable heating with glas; simple, beautiful, space saving and carefree.

## Create more living space.

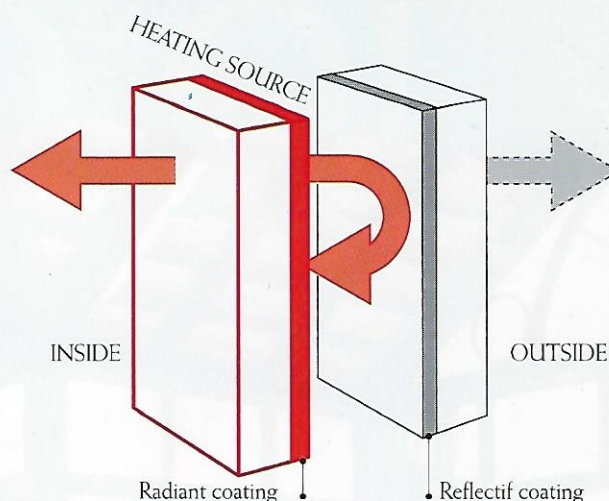

Verandas or winter gardens, that are hardly of any use during winter months, become living quarters, where it is cosy to dwell, thanks to IQ Glass®.

With IQ Glass® you can live close to nature, even in winter, there is only the glass separating you from your snow white garden, but it is the glass that surrounds you with energy saving, cosy warmth.

## Pure radiant heat

Classical heating systems work only after the surrounding air has been heated; heating glass, on the other side, makes you feel its radiant warmth almost immediately after the system has been switched on. With IQ Glass® disturbing air circulation and draughts are history, the whole place over you feel the same warmth and comfort.

IQ Glass® is a must for anybody who likes exclusive living comfort.

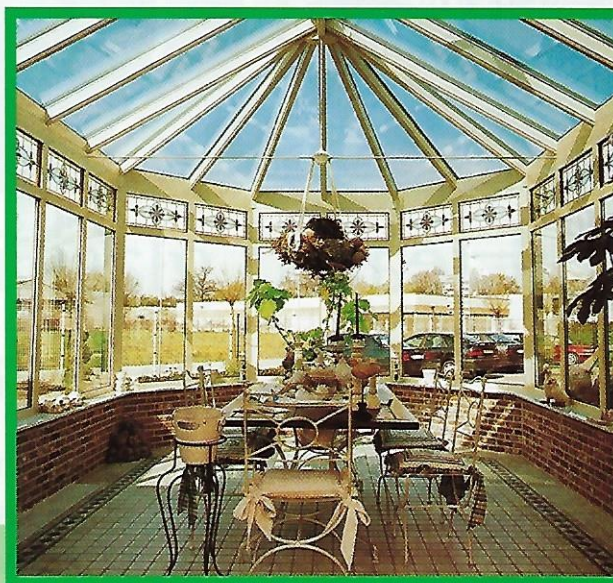

## Efficient

IQ Glass® offers the private user an economic solution thanks to the low use of energy, the low heating loss level and the agreeable radiation warmth ; however the tea room or restaurant owner gets even an extra economic aspect on top of all this. The whole surface of his property can be used optimally offering the customer comfort , because even the window seats guarantee an agreeable warmth. This is a message for the visionary sector of restaurants and pubs : having a nice meal near the window.

## Safe

Both sides of IQ Glass® consist of toughened(tempered) safety glass ( 5 times stronger than normal glass).

On top of that the outer window can be linked with the alarm system. Breaking of the outer window is only possible by assault and triggers the alarm. But, the burglar is still on the outside !

*the intelligent glass*
